

DESIGN BRIEF FOR FRONTEND

Verdicta and Veritune landing page

A single enterprise landing page for two call-analysis products by Avishkar AI. This brief has everything needed to design and build it: the page map, the product context, the design system, section-by-section copy, and the prompts for every image and icon.

PREPARED BY	Arpit, Co-founder, Avishkar AI
DATE	6 October 2026
AUDIENCE	US and global enterprise contact centres
PRIMARY GOAL	Get qualified teams to start a free pilot on their own calls
HOW TO READ	Pages 2 and 3 give the bird's eye view. Everything after is detail.

The page at a glance

Fourteen sections, top to bottom. Image slots (IMG 1 to 6) and icon slots (I1 to I14) are numbered here and match the prompts in section D.

How the page is built

Information hierarchy

Level	What sits here	Sections
1. Promise	One line on what the suite does and one action: start a free pilot	02 Hero
2. Problem	Manual QA hears 1 to 5 percent of calls; the costly calls sit in the rest	03 Problem
3. Products	Verdicta (agent quality) and Veritune (customer signal), then how they fit together	04, 05, 06
4. Proof and fit	Languages, numbers, how the pilot works, enterprise readiness, industries	07 to 11
5. Objections and close	FAQ, then a repeat of the pilot CTA	12, 13

The visual story

Every image comes from one world: a frosted glass telephone cord on a pastel floor, with small glowing orbs. The hero shows a tangled call straightening into something readable. Each later section reuses the cord and orbs to make its point, so the imagery carries the argument instead of decorating it.

- IMG 1, Problem: a field of glass marbles where only three glow. The rest are calls nobody hears.
- IMG 2, Verdicta: glass bars scoring one call, one bar in apricot for a fatal miss.
- IMG 3, Veritune: a cord shaped like a waveform, shifting from cool blue to warm apricot as the customer's tone changes.
- IMG 4, Suite band: two orbs, aqua and sky, under one cord. Both products read the same calls.
- IMG 5, Multilingual: five tinted cords merging into one. Many languages, one scorecard.
- IMG 6, Final CTA: the cord ends at a single apricot orb. The call that matters, found.

Interaction and motion

- Hero: a slow light pulse travels along the straight part of the cord (CSS or Lottie over the image). Glass UI cards float above the orbs and fade in one by one on load. Card content is illustrative: a parameter name and a flag, never a result claim.
- Scroll: sections fade and rise 12 to 16px on entry. Keep durations at 400 to 600ms with ease-out. Nothing should bounce.
- Numbers: stat values count up once when they enter the viewport.
- FAQ: single-open accordion.
- Respect prefers-reduced-motion: turn off the pulse and count-ups.

A. The products in brief

Verdicta and Veritune are AI products from Avishkar AI for contact centres. A typical QA team listens to 1 to 5 percent of calls by hand. These two products analyse all of them, from recordings the client already has.

Verdicta: agent quality

Verdicta scores every recorded call against the client's own QA scorecard. It checks script adherence, dead air, hold, escalation, call handling and resolution across 20 or more configurable parameters, with fatal and non-fatal scoring. It writes a summary of each call, confirms the agent updated the CRM, and shows heat maps of which parameters fail most by agent, team or campaign. The buyer is the head of QA or contact centre operations.

Veritune: customer signal and churn risk

Veritune listens to the customer side of the same calls. It scores tone and emotion through the call, detects which competitors the customer mentions, gives a churn risk score with a confidence level, and recommends a next action for each at-risk customer. The buyer is the head of CX, retention or customer success.

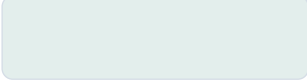

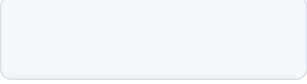

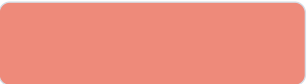

How they are sold

- As one suite on one page, but each works alone. The page should make it easy to understand both in under a minute.
- Entry point is a free pilot: the client uploads a batch of recordings or a CSV of recording links, with no integration needed, and gets a scored report back.
- Ideal client: a contact centre handling 300,000 or more call minutes a month, in healthcare, BPO, telecom or financial services.
- Deployment in Avishkar AI's cloud, the client's private cloud, or on-premises. Avishkar AI is ISO 27001 certified.
- Tone of the page: calm, precise and premium. It should feel like serious enterprise software, without hype.

B. Design system

Colour

Pulled from the hero image so page and image feel like one piece. Aim for roughly 80 percent backgrounds, 15 percent Ink and Slate, 5 percent accents.

 Mist #E3EEEC Page top, hero sky	 Frost #F4F7F9 Section background	 Periwinkle haze #B9C6E2 Hero floor, footer	 Glass #FFFFFF @ 60% Cards, nav bar
 Ink #16213A Headlines, primary button	 Slate #5A6680 Body text, subheads	 Aqua #7ED6D0 Verdicta	 Sky #8DB6EE Veritune
 Mint #A9DEC6 Pass, positive tone	 Apricot #F4AE62 Flags, churn risk, one stat	 Coral #EE8A7A Fatal / high risk in UI cards only	

- Background: a soft gradient from Mist at the top to Frost. Periwinkle haze returns only at the hero floor and the footer.
- Primary button: solid Ink, white text. Secondary button: Glass with a 1px Ink outline.
- Aqua always means Verdicta, Sky always means Veritune: labels, icon tints, chart lines. Never large fills.
- Apricot is reserved for attention: flags, churn alerts, one highlighted stat. Coral appears only inside UI cards for fatal or high-risk states.
- Accessibility: never set text in Aqua, Sky, Mint or Apricot on a light background. Use them for shapes, dots and lines. Slate on Mist passes for body text.

Typography

Role	Font	Spec
Headlines	Instrument Sans, semibold	Hero 64 to 72px desktop, 40px mobile. H2 40 to 44px. Letter spacing about -2%. Ink.
Accent phrase	Instrument Serif, italic	One phrase per headline at most, e.g. "every call". Same size as the headline, normal tracking.
Body	Instrument Sans, regular	17 to 18px, line height 1.6, Slate. Max line length about 68 characters.
Data labels	JetBrains Mono	12px, uppercase, letter spacing +4%. Call IDs, timestamps and scores on UI cards.
Fallback	Inter Tight + Inter	If the Instrument pairing does not work in build, swap without changing sizes.

All fonts are free on Google Fonts.

Components

GLASS CARD	Background white at 60%, backdrop blur 20px, 1px border white at 70%, radius 16 to 20px, shadow Ink at 6% with a large soft blur.
NAV	Glass card style, sticky, floating 16px from the top, pill-shaped. Primary button on the right.
FLOATING UI CARDS	Glass card, 280 to 320px wide. Small product label, one line of mono data, one status pill.
STATUS PILLS	Mint for pass, Apricot for flag, Coral for fatal. Text in the darkest shade of the same colour.
ICONS	3D glass icons (I1 to I14) at 64 to 96px in feature cards. Lucide or Phosphor line icons in Ink at 1.5px stroke for buttons, nav and FAQ.
GRID AND SPACING	12-column grid, 1200px max content width, 120 to 160px between sections on desktop, 80px on mobile.

C. Section-by-section copy and layout

Copy is final unless marked. Text in [brackets] still needs sign-off from Arpit before launch; build it in, but flag it in review.

SECTION 01

Nav

Layout: Floating glass pill, sticky | Assets: Avishkar AI wordmark

LINKS	Verdicta, Veritune, How the pilot works, FAQ
-------	--

BUTTON	Start a free pilot
--------	--------------------

SECTION 02

Hero

Layout: Full-bleed hero image; headline, subhead and buttons centred in the empty sky; glass UI cards anchored to the orbs | Assets: Hero image (final)

EYEBROW	Contact centre intelligence by Avishkar AI
---------	--

HEADLINE	Quality and customer signal from every call your agents take
----------	--

SUBHEAD	Verdicta scores agent performance against your own QA framework. Veritune reads customer sentiment, competitor mentions and churn risk. Together they cover your full call volume, in English and the other languages your customers speak.
---------	---

PRIMARY BUTTON	Start a free pilot on your calls
----------------	----------------------------------

SECONDARY	See how the pilot works (scrolls to section 09)
-----------	---

UNDER BUTTONS	Send us a batch of recordings and get a scored report back. No integration needed to start.
---------------	---

HEADLINES TO A/B TEST	Your QA team reviews a sample. Verdicta reviews every call. / Find the agents who need coaching and the customers about to leave / Full-volume call QA and churn signals for enterprise contact centres
-----------------------	---

SECTION 03

Problem

Layout: Text left, image right | Assets: IMG 1

HEADING	Your QA team hears a small fraction of your calls
---------	---

BODY	Most contact centres manually review 1 to 5 percent of their calls. Coaching plans, compliance reports and retention decisions all rest on that sample.
------	---

	The costly problems sit in the rest. An agent skips a required disclosure on every third call. A long-time customer mentions a competitor twice, gets no answer to their complaint, and hangs up. Nobody hears either call until the damage shows up in an audit or a cancellation.
--	---

TRANSITION LINE	Verdicta and Veritune listen to all of it.
-----------------	--

SECTION 04

Verdicta

Layout: Image left, text right; feature list as two columns of short rows with Aqua dots; product screenshot below in a glass frame | Assets: IMG 2, Verdicta UI screenshot (to be supplied)

LABEL	Verdicta, agent quality at full volume
HEADING	Score every call against the QA standard you already use
BODY	Verdicta applies your scorecard to each recorded call and tells you where agents follow the process and where they drift. Your QA analysts stop sampling and start coaching.
FEATURES	• 20+ parameters and sub-parameters per call, configured to match your existing QA form • Fatal and non-fatal scoring, with weightage you set • Checks script adherence, dead air, hold, escalation, call handling, resolution and summarisation • Threshold rules that score automatically, such as dead air over 5 seconds or hold over 60 seconds • CRM tagging check that confirms agents updated the record after the call • AI call summaries with final disposition and action items • Heat maps that show which parameters fail most, filtered by agent, team, call or campaign • Full call metadata and in-app recording playback

SECTION 05

Veritune

Layout: Mirror of section 04: text left, image right; Sky dots on features | Assets: IMG 3, Veritune UI screenshot (to be supplied)

LABEL	Veritune, customer signal and churn risk
HEADING	Know which customers are leaving before they cancel
BODY	Veritune listens to the customer side of the conversation. It tracks how their tone changes, which competitors they bring up, and how likely they are to churn, then recommends what your team should do next.
FEATURES	• Tone and emotion scoring across the call, including frustration, satisfaction and the moments a call escalates • Competitor mention detection that records which competitor came up, in what context and how often • Churn risk score with a confidence level • Recommended next actions for each at-risk customer • Sentiment timeline overlaid on the call recording • Critical and non-critical flags with weightage you control, so a competitor mention can outrank mild frustration • Dashboards for churn-risk buckets, campaigns and team views

SECTION 06

Suite band

Layout: Full-width IMG 4 with one line of text centred in its empty upper area | Assets: IMG 4

SUITE LINE	Verdicta tells you how your agents performed. Veritune tells you how your customers reacted. Use one or both on the same calls and the same dashboard.
------------	--

SECTION 07

Multilingual

Layout: Text left, image right, three points as a short list | Assets: IMG 5

HEADING	QA that works in the languages your customers speak
BODY	Global contact centres rarely run in one language. Offshore teams, regional support desks and multilingual customer bases all produce calls that English-only QA tools score badly or skip. Verdicta and Veritune analyse calls in English, Spanish, French, German, Portuguese, Arabic, Mandarin and Japanese. [Confirm: scoring, summaries and sentiment come back in English, so one QA team can review every region on the same dashboard.]
OPTIONAL LINE	[Keep only if confirmed: Calls that switch languages mid-conversation are analysed as they happen, without splitting or manual tagging.]
POINTS	• One scorecard applied across every language you operate in • [Confirm] Summaries and action items in English for central QA and leadership • Compare agent quality and customer sentiment across regions side by side

SECTION 08

Numbers and proof

Layout: Four glass stat cards in a row (2 x 2 on mobile); credibility line centred below | Assets: None

HEADING	Running in production at enterprise scale
STATS	• 99%+ of recorded calls analysed, compared with the 1 to 5% a manual QA team samples • 1 million minutes call minutes analysed to date • 80% reduction in QA review time at a live deployment • 5+ enterprise contact centres in production
CREDIBILITY LINE	Built by Avishkar AI, the applied AI team behind systems running across 30,000 ATMs and 68,000 telecom towers. On the ATM network, our AI agents cut mean time to repair from 90 minutes to 45.

SECTION 09

How the free pilot works

Layout: Four numbered glass cards in a row, each with its 3D icon on top; button centred below | Assets: I1 to I4

HEADING	See the results on your own calls before you commit
STEP 1	Share a batch of recordings. Upload the files directly or send a CSV of recording links. Nothing to integrate.
STEP 2	Set your scorecard. We configure Verdicta against your current QA form and agree which customer signals Veritune should flag.
STEP 3	Get your report. Every call in the batch comes back scored and summarised, with sentiment, competitor mentions and churn flags.
STEP 4	Review it with us. We walk your QA and CX leads through the findings and what a full rollout would look like.
NOTE	Pilot turnaround is [X business days] from receiving recordings. [Confirm data policy: Your data is used only for your pilot.]
BUTTON	Start your free pilot

SECTION 10

Enterprise readiness

Layout: Heading and body left-aligned above a 3 x 2 grid of glass cards, one icon each | Assets: I5 to I10

HEADING	Deploys where your security team needs it
BODY	Call recordings carry customer data, so you decide where Verdicta and Veritune run and who sees what.
CARD I5	Deployment: our cloud, your private cloud, or on-premises inside your environment
CARD I6	Security: Avishkar AI is ISO 27001 certified
CARD I7	Integrations: connect to telephony platforms such as Genesys Cloud, NICE CXone, Five9, Amazon Connect, Twilio and Avaya, and CRMs such as Salesforce, Microsoft Dynamics 365, HubSpot, Zendesk and ServiceNow through our API, or start with recording upload and CSV
CARD I8	Access control: separate logins for superadmins, admins, QA analysts and agents
CARD I9	White-label ready: run the interface under your own brand for clients or business units
CARD I10	Configurable dashboards: calls processed, SIP IDs, buckets, campaigns, agents and teams

SECTION 11

Who it's for

Layout: Four industry cards in a row, icon on top | Assets: I11 to I14

HEADING	Built for contact centres where every call counts
BODY	Verdicta and Veritune fit operations handling 300,000 or more call minutes a month, where manual QA cannot keep up.
I11 HEALTHCARE	Healthcare patient access and member services teams that need consistent scripts and clear records
I12 BPO	BPOs and outsourced CX providers reporting quality to their own clients
I13 TELECOM	Subscription and telecom businesses where churn is the number leadership watches
I14 FINANCE	Financial services support and collections teams with strict script requirements

SECTION 12

FAQ

Layout: Single-open accordion, max width 760px, centred | Assets: None

Q	Do we need to integrate anything before the pilot?
A	No. Upload recordings or send a CSV of recording links. Integration with your telephony and CRM comes later, if you roll out.
Q	Can we use our existing QA scorecard?
A	Yes. Verdicta's parameters, sub-parameters and weightage are configured to match the form your QA team already uses.
Q	Where does our call data live?
A	You choose: our cloud, your private cloud, or on-premises. Avishkar AI is ISO 27001 certified.
Q	Which languages do you support?
A	English, Spanish, French, German, Portuguese, Arabic, Mandarin and Japanese. Every language is scored on the same scorecard.
Q	Do we need both products?
A	No. Verdicta and Veritune work alone or together. Start with the one tied to your most pressing metric, whether that is agent quality or customer retention.
Q	Does this replace our QA team?
A	It changes their work. Instead of listening to a small sample, analysts review flagged calls and spend their time coaching agents.
Q	How is pricing structured?
A	[Confirm model, for example: pricing depends on monthly call volume and deployment type. We quote after the pilot, based on what you saw in it.]

SECTION 13

Final CTA

Layout: Full-bleed IMG 6; heading, body and buttons centred in its empty upper area | Assets: IMG 6

HEADING	Find out what your sample is missing
BODY	Send us a batch of recorded calls. We will score every one, flag the customers at risk, and show you what your current QA process did not catch.
PRIMARY BUTTON	Start a free pilot
SECONDARY LINK	Talk to our team

SECTION 14

Footer and SEO

Layout: Periwinkle haze background, Ink text | Assets: Avishkar AI wordmark

FOOTER LINE	Verdicta and Veritune are products of Avishkar AI. Applied AI engineering for operations that cannot afford downtime.
SEO TITLE	Verdicta and Veritune: AI call QA and churn signals
META DESCRIPTION	Score every contact centre call against your QA scorecard and catch churn risk early. Multilingual, on-prem ready. Start a free pilot.

D. Image and icon prompts

Use the final hero image as a style reference for every render (Midjourney: --sref with the hero URL), and append the shared style block to each prompt so the set matches.

Shared style block

Ultra high quality 3D render, frosted translucent glass with soft refraction, caustic light patterns and a faint iridescent rim light. Pastel palette of seafoam mist, powder blue, aqua, mint and one apricot accent. Smooth gradient background from pale seafoam at the top to soft periwinkle at the bottom, glossy softly reflective floor, diffuse studio light, shallow depth of field. Calm, premium, minimal aesthetic. No text, no letters, no logos, no people.

IMG 1: Problem, the sampled few (4:3)

A wide grid of about one hundred small clear glass marbles resting on a glossy surface, seen from a low three-quarter angle, rows receding softly into blur. Every marble is clear and unlit except three scattered ones that glow gently from within in pale aqua. The contrast between the many dark marbles and the few lit ones is the focus. Generous empty space in the upper third.

IMG 2: Verdicta, the glass scorecard (1:1)

A row of seven rounded glass bars of different heights standing on a glossy surface like a 3D bar chart, centred in the frame. Six bars glow softly from within in pale aqua and mint. One shorter bar glows apricot. A thin straight frosted glass cord runs along the base of the bars from left to right, connecting them. Soft reflections of each bar on the floor.

IMG 3: Veritune, the sentiment cord (1:1)

A single frosted glass cord drawn as a gentle flowing wave across the frame, like a soft audio waveform frozen in glass. Light inside the cord shifts gradually along its length from cool powder blue on the left through mint to warm apricot on the right. One small glowing apricot orb rests on the floor beneath the highest peak of the wave. Plenty of empty space around the wave.

IMG 4: Suite band, two orbs one cord (21:9)

Ultra wide panoramic composition. One straight frosted glass cord runs horizontally across the lower third of the frame from edge to edge. At the centre, two larger glass orbs rest side by side under the cord, one glowing aqua and one glowing powder blue, their coloured reflections overlapping on the floor between them. The upper two thirds of the frame are empty soft gradient for a line of text.

IMG 5: Multilingual, converging cords (4:3)

Five frosted glass cords, each tinted a different soft pastel (aqua, powder blue, mint, lilac, apricot), enter from the left side of the frame at different heights with gentle loose coils, then curve smoothly toward the right and merge into one single clear straight glass cord that exits the right edge. Soft caustic light where they meet. Empty space in the upper right.

IMG 6: Final CTA, the end of the line (21:9)

Ultra wide panoramic composition. A straight frosted glass cord enters from the left edge in the lower third and ends near the centre of the frame in a softly rounded tip. A single larger glass orb glowing warm apricot rests just beyond the tip, casting a warm reflection and a gentle halo on the glossy floor. Everything else is calm, empty gradient. The upper 60 percent of the frame is empty for a headline and button.

Icons I1 to I14 (1:1, one consistent set)

Same template for all fourteen; change only [OBJECT] and [COLOUR]. Generate in one session with the same seed or style reference.

A single 3D icon of [OBJECT], made of frosted translucent glass with soft rounded edges, centred on a plain very pale seafoam background, floating slightly above a soft shadow. Subtle inner glow in [COLOUR]. Gentle refraction and a faint iridescent rim light. Minimal, clean, premium app-icon style, consistent soft studio lighting, orthographic three-quarter view. No text, no letters, no logos.

Slot	Section	Object	Colour
I1	Pilot, share recordings	an audio waveform sitting on top of a folder	aqua
I2	Pilot, set your scorecard	a clipboard with three tick marks	aqua
I3	Pilot, get your report	a document with small bar chart columns	powder blue
I4	Pilot, review with us	two overlapping speech bubbles	mint
I5	Enterprise, deployment	a server rack inside a soft cloud	powder blue
I6	Enterprise, security	a shield with a keyhole	mint
I7	Enterprise, integrations	two plug connectors clicking together	aqua
I8	Enterprise, access control	a key with three small user dots on its ring	lilac
I9	Enterprise, white-label	a blank tag on a short loop of cord	apricot
I10	Enterprise, dashboards	a floating panel with a small line chart	powder blue
I11	Who it's for, healthcare	a heart with a pulse line running through it	mint
I12	Who it's for, BPO	a call centre headset	aqua
I13	Who it's for, telecom	a signal tower with three arcs	powder blue
I14	Who it's for, financial services	a stack of three coins	apricot

Production notes

- Export images as WebP (with JPEG fallback) at 2x display size. Keep the hero under 400 KB; lazy-load everything below the fold.
- Mobile: generate 9:16 versions of the hero, IMG 4 and IMG 6 with the subject in the bottom 40 percent. Do not crop the desktop images.
- If render backgrounds drift, mask the subject and place it on one shared CSS gradient (Mist to Periwinkle haze) so sections blend into each other.
- Hero headline sits on the image, so check contrast at every breakpoint. Ink text works on the light sky; add a soft Mist gradient behind the text block if needed.

Open items before launch

- Confirm all eight listed languages, and whether output comes back in English.
- Confirm which named telephony and CRM integrations exist today; remove the rest.
- Pilot turnaround time, pilot data policy, and the pricing answer in the FAQ.
- Verdicta and Veritune product screenshots for sections 04 and 05. Leave framed placeholders until they arrive.
